Solutions you can rely on – for a fast response.

**Greater safety with
a fire detection system
from Calanbau.**

Reliability is a top priority for us!

Solutions you can rely on – for a fast response.

CALANBAU has over 40 years' experience and is a certified VdS-approved installer of stationary fire protection systems. We ensure top-quality system installation, care and maintenance as a matter of course.

Fire represents a constant threat to life and property. So an immediate response to fire alarms is vital. Fire detection systems provide early warning and activate extinguishing systems for rapid fire fighting, while highly sensitive sensors react to the first sign of a fire and notify the system control centre.

Play it safe with a fire detection system from CALANBAU.

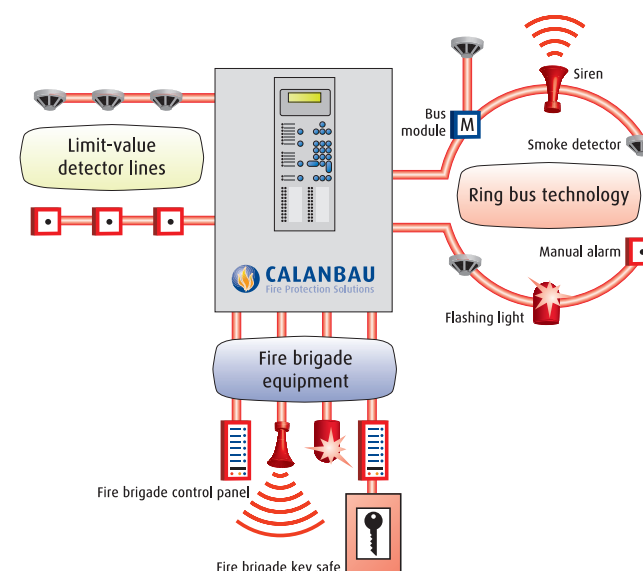

Key components of our fire detection systems:

- Alarm devices
- Fire detection control panel
- Fire brigade control panel
- Fire brigade key safe
- Optical smoke detectors
- Light-beam smoke detectors
- Heat detectors
- Multi-criteria detectors
- Smoke-intake system
- Remote indicator
- Non-automatic fire detector (manual call point)

Technical connection conditions for fire detection systems

The technical connection conditions for fire detection systems are published by the individual districts under the guidance of the local fire brigades. They specify the essential regulations on how a fire detection system is to be connected to the fire brigade or police control centre.

Simple configuration on our fire detection control panels enables optimised adaptation to your individual requirements.

Professional service to ensure your safety!

Only VdS-approved companies certified to DIN 14675 are allowed to carry out design, project planning, installation, commissioning and maintenance work on fire detection systems.

CALANBAU has satisfied these criteria for many years, which makes us an experienced and reliable partner.

Our staff can develop customised solutions to safeguard your property.
